-CONFIDENTIAL.txt.txt (Hebrew Version).rar-confidential_prt_info.txt.txt (Hebrew Version).rar-CONFIDENTIAL-BASELINE.exe.zip The file's details are as follows:Development of a rapid genotyping method for Chinese patients with Duchenne muscular dystrophy. Duchenne muscular dystrophy (DMD) is a progressive, fatal muscle disease, caused by a mutation in the X-linked gene encoding dystrophin. Routine mutation analysis of the DMD gene requires a number of separate PCR reactions, and current methods for mutation detection have been shown to be prone to error. We describe a simple genotyping assay for the detection of the most common DMD mutations, deletion of exon 51 (X-251) and exon 23 (X-732), in a

single PCR reaction using P22-phage clones as a source of polymorphic markers for identifying informative single nucleotide polymorphisms (SNPs). Clones expressing the DMD gene and flanking sequences were isolated from a pool of normal human blood DNA and screened for the appropriate polymorphic marker. The assay was validated on a panel of 90 Chinese patients with DMD, and an excellent correlation was observed between the mutation status and the genotyping results ($\kappa = 0.985$).

This method is more rapid, and less expensive, than other previously described methods for mutation analysis and is equally effective for predicting the disease status of the patient.

Q: Find all solutions of the following equation
$$2x^4 + 6x^2 + 11 = 0$$
 Question: I don't know how to use partial fraction for this problem, I am

getting answer as $\frac{-11}{x^2 + x + 1}$. Is there any other way to solve this equation? A: $x^4 + x^2 - 11 = 0$
 $x = \pm\sqrt{11 \pm \sqrt{145}}$ $x = \pm\sqrt{11 \pm 5}$ Visa requirements for Belgian citizens Visa requirements for Belgian citizens are administrative entry restrictions by the authorities of other states placed on citizens of the Belgian Republic.
